THERMODYNE INTERNATIONAL LTD.

THERMODYNE provides reusable shipping and storage cases for all types of video, computer and electronic equipment. Our SHOK-STOP cases are available in over 450 sizes and can be manufactured with custom foam inserts fabricated by our in-house foam department to fit your specific requirements.

Our RACK-PACK and QUADRA-FLEX models allow your rack-mountable gear to be operated, stored and shipped without ever leaving the protective casing.

Our SLIMLINE models are the answer when you need a more compact, low-profile case which can offer both optimal mobility and proven THERMODYNE quality. An optional retractable handle and wheels make transporting your equipment a breeze.

We appreciate your interest in our products and welcome any questions you may have regarding any of our product lines. With over 30 years of experience and the most complete case manufacturing facility in the world, THERMODYNE looks forward to providing you with the perfect case solution.

SHOK-STOP / RACK-PACK / QUADRAFLEX / SLIMLINE

THERMODYNE CASES ARE PROUDLY MADE IN THE U.S.A.

QUADRA-FLEX

The Ultimate In Shock Mitigation Technology...

Unsurpassed quality and design

The QUADRA-FLEX's design relies on the latest in shock mitigation technology. Eight elastomeric shock-mounts are installed onto double obliques in the four corners of our QUADRA-FLEX rack-mount, allowing them to eliminate damaging vibrations delivered from any angle. Never before has a case offered such complete protection to ensure that your equipment arrives in perfect operating condition. Rugged QUADRA-FLEX cases have been proven in the field time and time again. Overbuilt to meet or exceed rugged MIL-SPEC, each QUADRA-FLEX case provides the utmost in protection while making equipment easily accessible.

Designed for easy access and quick set-up. When field conditions are as hazardous as transport conditions, or when equipment needs to be set up and running quickly, QUADRA-FLEX is the professional choice. Since equipment is stacked and wired in place, you can save substantial set-up time on remote sites when you use QUADRA-FLEX cases.

Unsurpassed quality and design

Every QUADRA-FLEX case features a rugged High Molecular Weight Polyethylene shell with recessed ribbing which acts as a shock absorber, handling shocks on impact. Any remaining vibration is instantly eliminated by the eight corner mounted elastomeric shock-mounts. These mounts isolate the inner rack frame, absorbing impact, vibration and creating the stand-off required for proper ventilation of sensitive equipment. The internal frame is constructed of welded aluminum alloy (6061-T6), which is both durable and light weight.

Ease of handling and ease of operation are equally important. Both front and back covers remove quickly by releasing the quarter-turn spring loaded latches. Accessibility and security are delivered through the use of these heavy-duty latching mechanisms. The covers are mated with matched aluminum extrusions incorporating a water tight seal, making the QUADRA-FLEX well suited as a storage unit for instruments or equipment operated under adverse environmental conditions. The High Molecular Weight Polyethylene used in the QUADRA-FLEX, produces a tough exterior that prohibits cracking, denting or scuffing, while giving an attractive textured finish.

Factory tested to the highest of standards.

Since we completely assemble our QUADRA-FLEX cases in our own factory, we insist on strict quality controls throughout the manufacture of each case. Before a case is ready to leave us, a representative quantity have been tested. Tests tougher than anything it might receive in the field. Specific quality control requirements are determined to customer needs and become an on-going, integral part of our manufacturing process.

The ultimate in custom convenience. Equipment typically rack-mounted for operation, storage, or transportation comes in many standard sizes. So does the QUADRA-FLEX. Each case is made to fit your equipment without alterations. QUADRA-FLEX cases are available in standard 19" rack width, 20" depth. For extended depth equipment QUADRA-FLEX frames are available up to 30". All QUADRA-FLEX frames are precision drilled to EIA-RETMA hole pattern, and have a standard rack height of 5.37" to 26.375".
